Regarding Docket Number TMD-94-00-2

Dear Eileen & USDA,

Please adhere to the National Organic Standards Board's recommendations in regard to your Organic regulations.

I am particularly shocked that you might permit Genetically Engineered Organisms, ionizing radiation, and municipal sludge in organic agriculture. Please do not allow paracitocides and antibiotics in the production of meat and dairy sold as organic either.

The regulations as you have proposed them do not represent what I expect when I buy organic. If your regulations allow the above practices I believe that you will jeopardize all confidence in the term organic.

Thank you,
